

PRODUCT INFORMATION

10X Buffer Cfr9I (with BSA)

#_ _____

Lot: _____

Store at -20°C

BSA included

www.thermoscientific.com/onebio

1X Buffer Composition

10 mM Tris-HCl (pH 7.2 at 37°C), 5 mM MgCl₂,
200 mM sodium glutamate, 0.1 mg/ml BSA.

CERTIFICATE OF ANALYSIS

Functional test

Functionally tested in DNA digestion with Cfr9I restriction endonuclease. Digestion conditions are as described in activity assay of the enzyme. Reaction products analyzed by agarose electrophoresis and ethidium bromide staining. No change in digestion pattern is observed compared to previous lot.

Endo- and Exonucleases Assay

Single stranded and double stranded radiolabeled oligonucleotides are incubated with Buffer Cfr9I at 37°C for 16 hours, separated on polyacrylamide gel and analyzed by phosphoimaging. No signs of radiolabeled oligo degradation is considered as the absence of endo- and exonucleases activities.

Nicking activities Assay

Supercoiled pUC19 DNA is incubated with the buffer at 37°C for 17 hours and analyzed by agarose gel electrophoresis and ethidium bromide staining. There is no linearised plasmid form and relaxation of supercoiled plasmid form compared to negative control.

Quality authorized by:

Jurgita Zilinskiene

Rev.5

Important Note

This buffer contains BSA. In order to avoid the risk of bacterial growth, do not store buffer containing BSA at 4°C for periods longer than one week. If buffer is to be stored at 4°C it should be aliquoted into small portions and the main stock should be kept at -20°C.

PRODUCT USE LIMITATION

This product is developed, designed and sold exclusively *for research purposes and in vitro use only*. The product was not tested for use in diagnostics or for drug development, nor is it suitable for administration to humans or animals.

Please refer to www.thermoscientific.com/onebio for Material Safety Data Sheet of the product.
