

Thermo Scientific Nalgene Transparent Burets

(Acrylic body; PMP stopcock and tip; Teflon® TFE plug)
Cat. No. 3650

Nalgene® burets are individually calibrated and guaranteed to meet accuracy requirements of ASTM E287 Class B. They are compatible with most dilute acids and bases commonly used as titrants (except perchloric acid). They are unaffected by dilute mineral acids and bases, except hydrofluoric acid and ammonium hydroxide. The pH range of 1 to 14 is ideal, and up to 5% wt/wt of acids or 30% bases can be used.

These burets are not intended for use with alcohols or other organic solvents.

The body of the buret is molded of clear acrylic. While resilient, it may crack or shatter from harsh impact or other abuse.

The stopcock body and tip are made of polymethylpentene (PMP). The self-lubricating Teflon TPE stopcock plug will not seize and will never need greasing.

Cleaning

For accuracy in reading, always clean the buret before use, including the first time. Use a mild soap or detergent solution.

Do not use abrasive cleansers, wire brushes or acid cleaning solutions.

A rinse of 1% acetic acid solution will clean burets used with NaOH solution. Thoroughly rinse with distilled water afterwards. The stopcock plug can be removed for easy cleaning by squeezing and slipping off the retaining O-ring.

Do not autoclave the buret.

For further information, see the current Nalgene Labware Catalog or contact Technical Service at the numbers listed below.
