

InoPurauto Series Automated Nucleic Acid Purification System

Automate low-throughput sample preparation within your laboratory workflow using Magnetic Particle Processors.

It for processing volumes up to 3ml, the system enable all purification steps in a single-strip of nine tubes, and support 20 processed samples per run.

With the ability to go down to 50ul to release target molecules, samples such as DNA or RNA can isolated and concentrated from larger starting volumes at the same time. INOPurAuto Series is a bench top device for DNA and RNA purification by using magnetic separation technology from different starting materials, such as blood, cultured cells or bacteria, tissues, cell-free body fluids and plant samples.

The device is capable of using magnetic rods to transfer particles through the various purification phases of binding, mixing, washing and elution, offering a solution with minimized hands-on time.

The DNA and RNA purification is of high quality and high molecular weight.
